Why Piazza?

Student Roster: [Download Roster as CSV](#)

...out of 55 (estimated) [Edit](#)

Democratic

- all students have access to questions and answers (vs. sending an email to instructors)
- Other students can answer questions

Why Piazza?

Student Roster: [Download Roster as CSV](#)

...out of 55 (estimated) [Edit](#)

Privacy

- Comply with Family Educational Rights and Privacy Act (FERPA) regulations
- email addresses and course enrollment information are only accessible to instructors of the class
- Posts remains anonymous to classmates
- Only instructors and enrolled students can access posts

Why Piazza?

Student Roster: [Download Roster as CSV](#)

...out of 55 (estimated) [Edit](#)

... instructors also benefit

- Piazza helps instructors eliminate their over-crowded email inboxes

Reading Responses

Students are expected to respond to different sets of readings by submitting at least one question per session marked with an asterisk [*]

Assignment 1

- It is okay if you have more than 1,500 words. The word count **does not include references, citations, and sources**
- All data for one variable must come from the LEHD database – the only variable not found in the ACS is Commute Flows
- We will learn how to obtain commute flows data today during the lab
- WordPress does not allow for in-real-time collaboration

Assignment 1

- How to obtain MoE from Standard Errors?

$$\text{Margin of error} = MOE_{\gamma} = z_{\gamma} \times SE$$

Where z_{γ} denotes the *quantile* (also, commonly, a *z-score*)

The MoE reported by the Census are estimated with a 90 percent confidence level (z-score = 1.65)

Assignment 1

- How to obtain MoE for percentages calculated from ACS count data?

Table 1 - Population by Age Group (Tract 4004)

Age	Estimate	MoE
Child	678	161
Working Age Adult	2,810	247
Senior Adult	498	97
Total	3,986	250

Source: 2017 ACS 5-Year Estimates, Table S1810.

Note: Age summarized from Census table into three categories: "Child" (aged 17 and under), "Working Age Adult" (aged 18-64), and "Senior Adult" (aged 75 years and over).

Figure 1 - Population by Age Group (Tract 4004)

Source: 2017 ACS 5-Year Estimates, Table S1810.

Note: Age summarized from Census table into three categories: "Child" (aged 17 and under), "Working Age Adult" (aged 18-64), and "Senior Adult" (aged 75 years and over).

Understanding and Using American Community Survey Data

What All Data Users Need to Know

Issued July 2018

If we define the proportion as $\hat{P} = \hat{X}/\hat{Y}$, then the MOE of this proportion is approximated as:

$$\text{MOE}(\hat{P}) = \frac{1}{\hat{Y}} \sqrt{[\text{MOE}(\hat{X})]^2 - (\hat{P}^2 * [\text{MOE}(\hat{Y})]^2)}$$

If we define the proportion as $\hat{P} = \hat{X}/\hat{Y}$, then the MOE of this proportion is approximated as:

$$\text{MOE}(\hat{P}) = \frac{1}{\hat{Y}} \sqrt{[\text{MOE}(\hat{X})]^2 - (\hat{P}^2 * [\text{MOE}(\hat{Y})]^2)}$$

\hat{P} is the proportion of population under classified as children

Table 1 - Population by Age Group (Tract 4004)

Age	Estimate	MoE
Child	\hat{X} 678	161
Working Age Adult	2,810	247
Senior Adult	498	97
Total	\hat{Y} 3,986	250

If we define the proportion as $\hat{P} = \hat{X}/\hat{Y}$, then the MOE of this proportion is approximated as:

$$MOE(\hat{P}) = \frac{1}{\hat{Y}} \sqrt{[MOE(\hat{X})]^2 - (\hat{P}^2 * [MOE(\hat{Y})]^2)}$$

\hat{P} is the proportion of population under classified as children

Table 1 - Population by Age Group (Tract 4004)

Age	Estimate	MoE	
Child	\hat{X} 678	161	$MoE(\hat{X})$
Working Age Adult	2,810	247	
Senior Adult	498	97	
Total	\hat{Y} 3,986	250	$MoE(\hat{Y})$

If we define the proportion as $\hat{P} = \hat{X}/\hat{Y}$, then the MOE of this proportion is approximated as:

$$MOE(\hat{P}) = \frac{1}{\hat{Y}} \sqrt{[MOE(\hat{X})]^2 - (\hat{P}^2 * [MOE(\hat{Y})]^2)}$$

Table 1 - Population by Age Group (Tract 4004)

Age	Estimate	MoE	\hat{P}	$MoE(\hat{P})$
Child	678	161	17.0%	3.9%
Working Age Adult	2,810	247		
Senior Adult	498	97		
Total	3,986	250		

If we define the proportion as $\hat{P} = \hat{X}/\hat{Y}$, then the MOE of this proportion is approximated as:

$$MOE(\hat{P}) = \frac{1}{\hat{Y}} \sqrt{[MOE(\hat{X})]^2 - (\hat{P}^2 * [MOE(\hat{Y})]^2)}$$

Table 1 - Population by Age Group (Tract 4004)

Age	Estimate	MoE	\hat{P}	$MoE(\hat{P})$
Child	678	161	17.0%	3.9%
Working Age Adult	2,810	247	70.5%	4.4%
Senior Adult	498	97	12.5%	2.3%
Total	3,986	250		

Figure 2 - Population Distribution by Age Group (Tract 4004)

Source: 2017 ACS 5-Year Estimates, Table S1810.

Notes: [a] **Base = 3,986**; [b] Age summarized from Census table into three categories: "Child" (aged 17 and under), "Working Age Adult" (aged 18-64), and "Senior Adult" (aged 75 years and over).

Table 2 - Population Distribution by Age Group (Tract 4004)

Age	Estimate	MoE
Child	17.0%	3.9%
Working Age Adult	70.5%	4.4%
Senior Adult	12.5%	2.3%

Veteran Outcomes Experimental Data Released

The U.S. Census Bureau announces the release of experimental Veteran Employment Outcomes (VEO) statistics. These tabulations show earnings and employment outcomes for U.S. Army veterans one, five, and 10 years after discharge, by military occupation, rank, demographics, industry and geography of employment. VEO data can be accessed via [VEO Explorer](#), an interactive data tool.

About Us

The Longitudinal Employer-Household Dynamics (LEHD) program is part of the [Center for Economic Studies](#) at the [U.S. Census Bureau](#). The [LEHD program](#) produces new, cost effective, public-use information combining federal, state and Census Bureau data on employers and employees under the [Local Employment Dynamics \(LED\) Partnership](#). State and local authorities increasingly need detailed local information about their economies to make informed decisions. The LED Partnership works to fill critical data gaps and provide indicators needed by state and local authorities.

Under the LED Partnership, states agree to share Unemployment Insurance earnings data and the Quarterly Census of Employment and Wages (QCEW) data with the Census Bureau. The LEHD program combines these administrative data, additional administrative data and data from censuses and surveys. From these data, the program creates statistics on employment, earnings, and job flows at detailed levels of geography and industry and for different demographic groups. In addition, the LEHD program uses these data to create partially synthetic data on workers' residential patterns.

Longitudinal Employer-Household Dynamics

[Main](#) [Applications](#) [Data](#) [Learn More](#) [Research](#) [State Partners](#) [LED in Action](#)

The LEHD program is **part of the Center for Economic Studies at the U.S. Census Bureau**. The program produces new, cost effective, **public-use** information combining **federal, state and Census Bureau data** on **employers** and **employees** under the Local Employment Dynamics (LED) Partnership. State and local authorities **increasingly need detailed local information about their economies to make informed decisions.**

Longitudinal Employer-Household Dynamics

[Main](#) [Applications](#) [Data](#) [Learn More](#) [Research](#) [State Partners](#) [LED in Action](#)

Note

- The data released by LEHD are based on tabulated and modeled administrative data, which are subject to error
- Because the **estimates are not derived from a probability-based sample**, no sampling error measures are applicable.

Questions that can be answered with LEHD

- How has the distribution of women/men, race/ethnicity changed in certain employment sectors over time?

Questions that can be answered with LEHD

- How has the distribution of women/men, race/ethnicity changed in certain employment sectors over time?
- Where do young workers who work in San Francisco live?

Questions that can be answered with LEHD

- How has the distribution of women/men, race/ethnicity changed in certain employment sectors over time?
- Where do young workers who work in San Francisco live?
- What percentage of high-wage workers live in San Francisco but commute to San Jose (e.g. by Google bus)?

Questions that can be answered with LEHD

OnTheMap Glossary - Report Terms:

Click here for the glossary of [Mapping Terms](#)

Note: For job definitions not otherwise specified, the reference period is the 2nd quarter of each calendar year (April-June). Throughout OnTheMap - unless otherwise stated - jobs are defined as 'Beginning of Quarter Employment'. Beginning of Quarter Employment is the total number of workers who were employed by the same employer in both the current (2nd) and previous (1st) quarter.

Total All Jobs A count of all jobs that meet a user's specification of geography, years, and/or labor market segments.

Total Primary Jobs A count of primary jobs that meet a user's specification of geography, years, and/or labor market segments. A primary job is the highest paying job for an individual worker for the year. The count of primary jobs is the same as the count of workers.

Total Private Jobs A count of private-sector jobs that meet a user's specification of geography, years, and/or labor market segments.

Total Private Primary Jobs A count of private-sector primary jobs that meet a user's specification of geography, years, and/or labor market segments. A primary job is the highest paying job (either public or private) for an individual worker for the year.

Jobs by Worker Age The categories are Age 30 or younger, Age 31 to 54 years, and Age 55 or older.

Jobs by Earnings The categories are \$1,250 per month or less, \$1,251 to \$3,333 per month, and More than \$3,333 per month.

Jobs by Industry Type (2-digit NAICS) The categories are all 2-digit NAICS codes, otherwise known as industry sectors. See the U.S. Census Bureau's [documentation on NAICS](#) for more information on these industry sectors.

Report Settings A section at the bottom of each report summarizing the settings and selection area(s) chosen in the Analysis Settings popup.
